Project Decision

Project Title	Scope (6 pts max per person)	Access (6 pts max per person)	Interest (6 pts max per person)	Total (18 pts per person)
	Is the project achievable? Is the project modular?	Is your point of contact available every two weeks? Is your point of contact a decision-maker in the org?	Are you excited about the topic and/or organization? Are your skills being matched well to your piece?	Scope + Access + Interest
Restaurant POS System to enhance the experience for customers to order food directly from the table	Achievability: 2 This project can be as large as we want it to be in terms of scope or as small, we need to work on balancing features and usability to make sure we don't go overboard. Modularity: 3 The whole point of this system is for it to be able to be used by any restaurant giving us the ability to sell it as a modular system they can change based on their needs.	POC: 3 The decision maker will be a main restaurant owner who will be out first customer, they have stated they will be available as they are excited to use our software when it's finished. Decision Maker: 3 As stated above, the decision maker will be the restaurant owner or main user of the software.	Excited: 3 Yes, we are very excited to bring this project to life and proudly represent Sharktooth Software! Skill Match: 2 Our skills are very flexible when it comes to this project. While some of us show a greater level of competence with POS systems, others are able to cover in other areas such as documentation and organization of the overall project.	2 + 3 + 3 + 3 + 3 + 2 = 16
